## Amendments to the Claims

- 1. (currently amended) A method of releasing a protein of interest from host cells comprising
  - a. suspending the host cells in a buffer, and
  - b. adding a detergent to the suspended cells wherein the detergent is an amphipathic charged amine or an amphipathic charged amine oxide, and wherein the detergent is in a concentrated form of at <u>least</u> 3 times the desired final concentration of the detergent after dilution in the buffer of step a.
- 2. (currently amended) A method of releasing a protein of interest from host cells comprising
  - a. suspending the host cells in a buffer, and
  - b. adding a detergent to the suspended cells, wherein the detergent is selected from the group consisting of : tributylphosphate, dimethyldecylamine, dimethyltridecylamine, dimethylundecylamine, dimethyldidecylamine, dimethyldecylamine, dimethyldecylamine, dimethyldecylamineoxide, dimethylundecylamineoxide, dimethyldidecylamineoxide, dimethyltetradecylamineoxide and dimethyltridecylamineoxide, and wherein the detergent is in a concentrated form of at least 3 times the desired final concentration of the detergent after dilution in the buffer of step a.
- 3. (currently amended) The method of claim 1 er 2, wherein the detergent is not dimethyltridecylamine.
- 4. (currently amended) The method of claim 3, further comprising the step of adding glycerol to the suspended host cells, and wherein the glycerol is in a concentrated form of at <u>least</u> 3 times the desired final concentration of the glycerol after dilution in the buffer of step 1.
- 5. (original) The method of claim 4, wherein the detergent comprises a final concentration of between 0.1 to 10 percent.

- 6. (original) The method of claim 4, wherein the glycerol comprises a final concentration of between 0.6 to 15 percent.
- 7. (original) The method of claim 5, wherein the glycerol comprises a final concentration of between 0.6 to 6 percent.
- 8. (original) The method of claim 1, wherein the detergent added is a pure detergent.
- 9. (original) The method of claim 1, wherein the host cells are at least 1 kg in weight.
- 10. (original) The method of claim 1, wherein the host cells are Pichia pastoris cells.
- 11. (original) The method of claim 1, wherein the buffer has an ionic strength of less than 350 mM and at least 1 mM.
- 12.(original) The method of claim 1, further comprising the step of incubating the cell and detergent mixture from 90 minutes to 24 hours.
- 13. (original) The method of claim 12, wherein the incubation is from 8 hours to 24 hours.
- 14. (original) The method of claim 1, further comprising the step of incubating the cell and detergent mixture at a temperature of between about 3°C and about 10°C.
- 15. (new) The method of claim 2, wherein the detergent is not dimethyltridecylamine.
- 16. (new) The method of claim 3, further comprising the step of adding glycerol to the suspended host cells, and wherein the glycerol is in a concentrated form of at least 3 times the desired final concentration of the glycerol after dilution in the buffer of step 1.

- 17. (new) The method of claim 4, wherein the detergent comprises a final concentration of between 0.1 to 10 percent.
- 18. (new) The method of claim 4, wherein the glycerol comprises a final concentration of between 0.6 to 15 percent.
- 19. (new) The method of claim 5, wherein the glycerol comprises a final concentration of between 0.6 to 6 percent.
